		IX TYPE	VX TYPE	EV TYPE	EGV TYPE	EG TYPE
Firing end configuration						
Center electrode	Diameter (mm)	0.6	0.8	1.0	1.0	1.3
	Material	Iridium	Platinum	Gold Palladium	Gold Palladium	Nickel
Ground electrode configuration		Conical electrode tip	Conical electrode tip	———	———	———

PLUG	MATERIAL	BENEFITS
EG	Nickel	Good ignitability and acceleration comparable to a EV or EGV type but does not have the same lasting durability as the gold or platinum.
EV	Gold Palladium	Good ignitability, and durability, enhanced antifouling capabilities.
EGV	Gold Palladium	Good ignitability, durability, and better acceleration than EG, or EV.
IX	Iridium	The ignitability and durability is better than platinum. Also featuring tapered ground strap for less quenching effect.
VX	Platinum	Platinum material is much harder than nickel or gold, so resistance to wear is greater. Also features a taper ground strap for less quenching effect.

■ Comparison for ignitability
